## 1. ANTECEDENTES

Mediante el D.S. (MINECON) N° 72 del 13 de junio de 2011 que aprobó el Reglamento de certificación y otros requisitos sanitarios para la importación de especies hidrobiológicas, publicado en el Diario Oficial el 24 de marzo de 2012, se dispone, entre otras materias, que el Servicio deberá informar semestralmente a la Subsecretaría las especies internadas al país, el número de ejemplares internados, estado de desarrollo, país, zona, compartimento y centros de cultivo de origen de los mismos y el nombre del importador, y demás información que la Subsecretaría solicite. En el mes de mayo de cada año, la Subsecretaría emitirá un informe sobre las internaciones de especies realizadas el año inmediatamente anterior. Este informe será publicado en el sitio web de la Subsecretaría de Pesca y Acuicultura.

Con fecha 29 de octubre de 2019 y 03 de marzo de 2020, el Servicio Nacional de Pesca y Acuicultura remitió a esta Subsecretaría la información correspondiente a las especies hidrobiológicas vivas internadas al país durante el primer y segundo semestre del año 2019, respectivamente.

Así las cosas, conforme a lo señalado en el artículo 3° del D.S. (MINECON) N° 72 de 2011, mediante el presente se informan las especies hidrobiológicas vivas importadas al país durante el año 2019.

## 2. ESPECIES HIDROBIOLÓGICAS VIVAS IMPORTADAS DURANTE EL AÑO 2019.

De acuerdo a lo informado por el Servicio Nacional de Pesca y Acuicultura, durante el año 2019 se realizaron 3.686 importaciones de especies hidrobiológicas a Chile, las cuales involucraron el ingreso de 9.655.158 ejemplares de diferentes especies a países en distintos estadios de desarrollo (Anexo 1).

Las especies importadas fueron de 8 categorías incluyendo anémonas, corales, crustáceos, equinodermos, moluscos (bivalvos, caracoles y cefalópodos), peces, quelicerados y rocas vivas. De éstos, los ejemplares importados en mayor cantidad fueron los peces con 9.649.437 ejemplares, correspondientes al 99,9 % del total importado.

En la tabla 1 se detalla el número de ejemplares importados y representación porcentual, según categoría durante el año 2019.

Tabla 1. Número de ejemplares importados y representación porcentual, según categoría, año 2019.

| Categoría                                   | N° individuos    | Porcentaje     |
|---|------------------|----------------|
| Anémonas                                    | 90               | 0,001          |
| Corales                                     | 388              | 0,004          |
| Crustáceos                                  | 2.888            | 0,030          |
| Equinodermos                                | 46               | 0,000          |
| Moluscos (bivalvos, caracoles, cefalópodos) | 2.261            | 0,023          |
| Peces                                       | 9.649.437        | 99,941         |
| Quelicerados                                | 6                | 0,000          |
| Rocas vivas                                 | 42               | 0,000          |
| <b>Total</b>                                | <b>9.655.158</b> | <b>100,000</b> |

Las especies importadas por cada categoría informada, se detallan en la tabla 2.

Tabla 2. Especies importadas por categoría, año 2019.

| CATEGORÍA | ESPECIES                    |
|-----------|-----------------------------|
| ANÉMONAS  | <i>Condylactis gigantea</i> |

|                |                                  |
|----------------|----------------------------------|
|                | <i>Condylactis passiflora</i>    |
|                | <i>Entacmaea quadricolor</i>     |
|                | <i>Heteractis crispa</i>         |
|                | <i>Phymanthus crucifer</i>       |
|                | <i>Sabellastarte magnifica</i>   |
|                | <i>Stichodactyla gigantea</i>    |
| <b>CORALES</b> | <i>Acanthastrea lordhowensis</i> |
|                | <i>Acropora formosa</i>          |
|                | <i>Acropora horrida</i>          |
|                | <i>Acropora millepora</i>        |
|                | <i>Acropora subulata</i>         |
|                | <i>Acropora tenuis</i>           |
|                | <i>Alveopora gigas</i>           |
|                | <i>Blastomussa wellsii</i>       |
|                | <i>Briareum asbestinum</i>       |
|                | <i>Catalaphyllia jardinei</i>    |
|                | <i>Clavularia sp</i>             |
|                | <i>Cyphastrea species</i>        |
|                | <i>Discosoma coeruleus</i>       |
|                | <i>Discosoma sp</i>              |
|                | <i>Duncanopsammia axifuga</i>    |
|                | <i>Euphyllia ancora</i>          |
|                | <i>Euphyllia divisa</i>          |
|                | <i>Euphyllia glabrescens</i>     |
|                | <i>Favia favius</i>              |
|                | <i>Favia sp</i>                  |
|                | <i>Favites abdita</i>            |
|                | <i>Favites sp</i>                |
|                | <i>Fungia sp</i>                 |
|                | <i>Goniastrea species</i>        |
|                | <i>Goniopora lobata</i>          |
|                | <i>Goniopora sp</i>              |
|                | <i>Gorgonia sp</i>               |

|                   |                                 |
|-------------------|---------------------------------|
|                   | <i>Heliofungia actiniformis</i> |
|                   | <i>Leptastrea species</i>       |
|                   | <i>Lobophyllia corymbosa</i>    |
|                   | <i>Lobophyllia sp</i>           |
|                   | <i>Lobophytum pauciflorum</i>   |
|                   | <i>Montipora danae</i>          |
|                   | <i>Montipora sp</i>             |
|                   | <i>Palythoa caribbea</i>        |
|                   | <i>Phymanthus crucifer</i>      |
|                   | <i>Platygyra species</i>        |
|                   | <i>Plerogyra sinuosa</i>        |
|                   | <i>Ricordea yuma</i>            |
|                   | <i>Sarcophyton elegans</i>      |
|                   | <i>Scolymia australis</i>       |
|                   | <i>Scolymia species</i>         |
|                   | <i>Tubipora musica</i>          |

Respecto al estadio de desarrollo en que se encontraban los ejemplares al momento de la importación, del total de especies, 643.158 ingresaron en estado de juvenil y 9.012.000 lo hicieron en estado de ova embrionada. El detalle de lo informado se presenta en el gráfico 1.

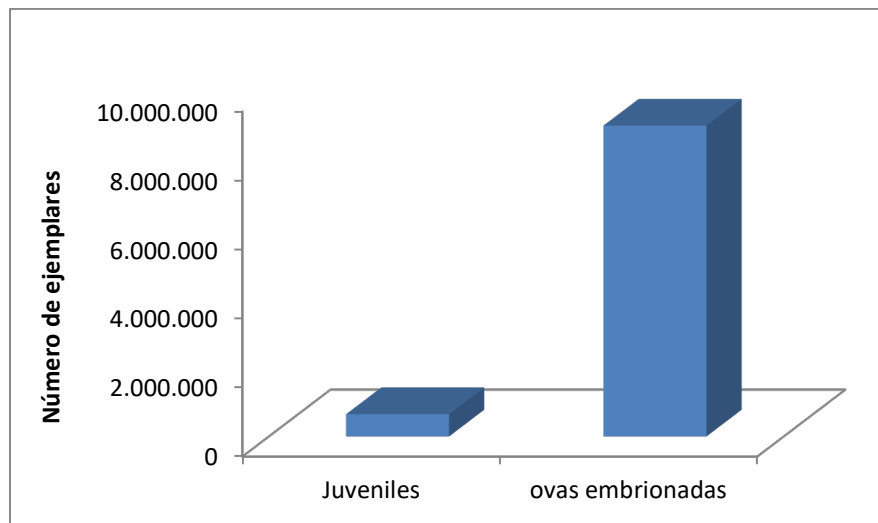

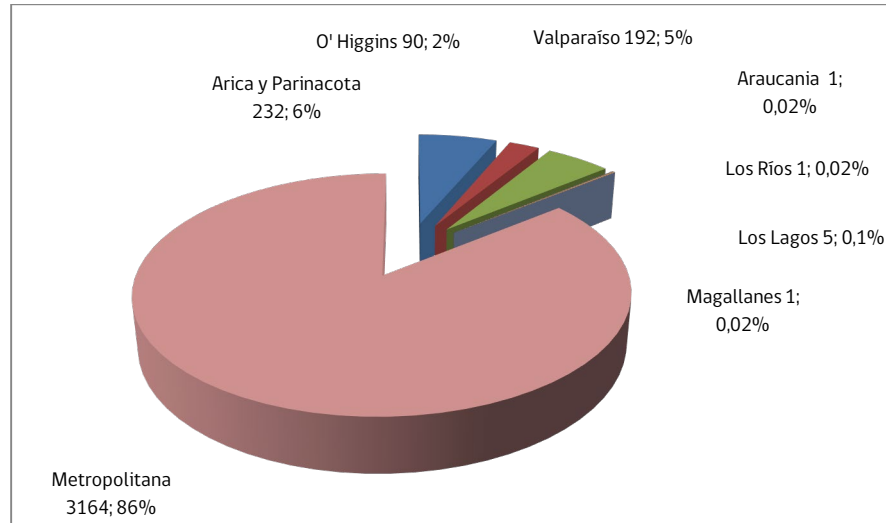

Gráfico 1. Número de ejemplares importados, según estadio de desarrollo, año 2019.

Una vez realizadas las importaciones al país, éstas fueron destinadas a las regiones de Arica y Parinacota, Libertador Gral. Bernardo O´Higgins, Valparaíso, La Araucanía, Los Ríos, Los Lagos, Magallanes y Metropolitana. De éstas, los principales destinos fueron la región Metropolitana que recibió 3.164 (86%) importaciones, seguida por la región de Arica y Parinacota que recibió 232 (6%) de las importaciones y Valparaíso que recibió 192 (5%) de las importaciones realizadas durante el año 2019 (Anexo 2).

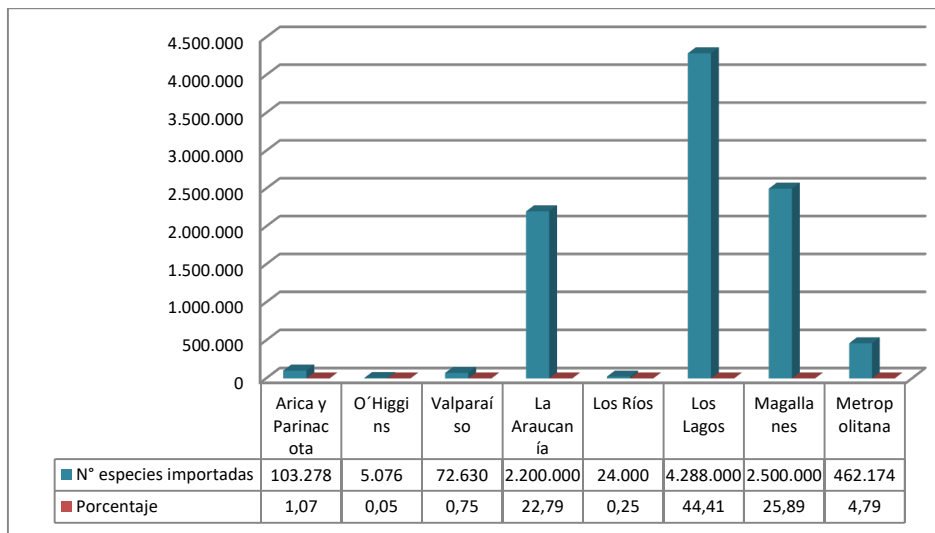

En el gráfico 2 se muestra la cantidad de importaciones destinadas a cada región y representación porcentual, para el año 2019.

**Gráfico 2. Número de importaciones destinadas por región y representación porcentual, año 2019.**

En relación al número de ejemplares recepcionados por región respecto del número total de ejemplares importados durante el año 2019, 4.288.000 ejemplares fueron destinados a la región de Los Lagos, 2.500.000 fueron destinados a la región de Magallanes, 2.200.000 fueron destinados a la región de La Araucanía y 462.174 ejemplares se destinaron a la región Metropolitana. Los restantes 204.984 ejemplares del total importado, se distribuyeron entre las regiones de Arica y Parinacota, Libertador Gral. Bernardo O'Higgins, Valparaíso y Los Ríos (Anexo 2).

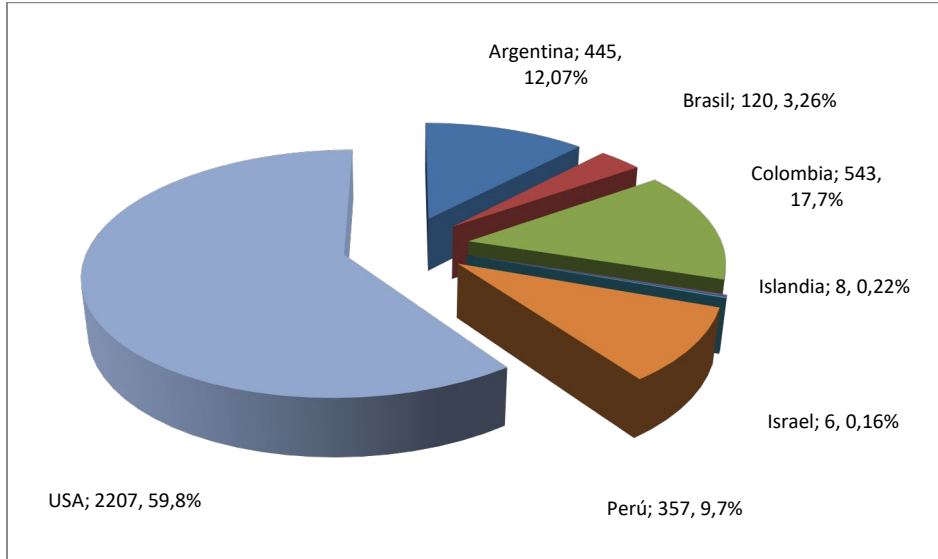

En el gráfico 3 se muestra el número de ejemplares destinados por región respecto del número total de ejemplares importados durante el año 2019.

**Gráfico 3. Número de ejemplares distribución por región a partir de las importaciones realizadas durante el año 2019 y representación porcentual.**

En cuanto a los países exportadores, las especies hidrobiológicas ingresadas a Chile durante el 2019 provinieron principalmente de Estados Unidos desde donde se realizaron 2.207 (59,8%) importaciones, seguido por Colombia y Argentina desde donde se realizaron 543 (14,3%) y 445 (12%) importaciones, respectivamente.

En el gráfico 4, se muestra el detalle de los países desde donde provinieron las importaciones de especies hidrobiológicas realizadas durante el año 2019.

**Grafico 4. Países exportadores de especies hidrobiológicas, año 2019.**

## RESUMEN

1. Las especies mayormente importadas durante el año 2019 fueron peces, seguidos por crustáceos y moluscos.
2. Los principales destinos de las importaciones efectuadas durante el año 2019 fueron la región Metropolitana, seguida por la región de Arica y Parinacota y la región de Valparaíso.
3. En cuanto al número de ejemplares recepcionados por región respecto del total de ejemplares importados durante el año 2019, fue la región de Los Lagos la que recibió más ejemplares, seguida por la región de Magallanes y luego por la región de la Araucanía.
4. Respecto a los países exportadores, Estados Unidos fue el principal abastecedor de especies hidrobiológicas a Chile durante el 2019, seguido por Colombia y Argentina.

  
EUGENIO ZAMORANO VILLALOBOS  
Jefe División de Acuicultura

ABP/MAAG/maag.

## **ANEXOS**

**Anexo 1. Especies hidrobiológicas vivas importadas al país durante el año 2019.**

|    | Importador                  | Exportador                | Especie                        | Nº de individuos | Estadio desarrollo | Procedencia |
